

## **Compression & Injection Molding Process Design**

Over the last 47 years in the molding industry, I have launched over 300 new projects using SMC, BMC and the Compression & Injection Molding process. Through these experiences I have developed a solid skill set in SMC, Product Development, Compression, and Injection Molding.

**LanKorra** offers a full review of your current process & procedures by utilizing **Design Failure Mode Effects Analysis** and **Process Failure Mode Effects Analysis**, both of which are a systematic, proactive tool used to identify and evaluate potential failures and their causes within design and process before they happen. It helps prevent problems related to productivity, quality, and safety by assessing the severity, occurrence, and detection of potential failures, allowing organizations to implement actions to mitigate risks and improve processes controls. LanKorra will work with your team to execute these processes.
