

Film Spreader Brush Rolls

When using a Nylon or Co-extruded Carrier Film, creasing and wrinkles trap air during application, causing quality problems.

This issue can be reduced significantly by using an industrial Brushes Roll. The rows of spaced bristles flex and assist in removing wrinkles, air, and straightening the film before passing through the Doktor Boxes.

The Brush Rolls are mounted directly to the SMC Machine Frame with supplied Mounts & Brackets.

All brushes are replaceable and can also come with an Anti-Static material if needed.

Standard Brush Rolls are: 102 mm in diameter, and 24" to 60" in length.

Custom sizing is also available.
