

## **Process Training & Trouble Shooting Tools**

The SMC Industry, as it matures, is losing many of its Process Designers that have the hands-on know-how and knowledge. There're are no college classes to take that teach someone how to make SMC and BMC or how to Compression Mold SMC or BMC. Knowledge is typically developed through years of hands-on learning from experienced Operators at Captive SMC Manufacturers and Molders.

**LanKorra** can provide your employees with hands-on Training and Troubleshooting skills for the production of SMC, BMC and the Compression or Injection Molding process. However, understanding the process is not the only important factor, learning how to keep the product within the Specification Tolerances is also highly important. LanKorra will teach your employees the importance of having specifications and where to measure and adjust the materials to maintain a consistent product.

LanKorra can also train your Engineers and Employees in both the technical and mechanical aspects of how to operate your machines faster and more efficiently. We will provide documents for the start-up process, the production and packaging process, as well as control plans. Thus, provide your Operators and Engineers with the tools and processes necessary to run the equipment at top performance.
